

Master's

Pedagogy Graduate

Degree

MASTER

Program length

2,5 years

ECTS

120

Pre-requisites

Bachelor degree, English Language

Program description

Pedagogy is a science that revolves around how children learn and develop in an educational setting. Throughout their advanced education, students may complete courses designed to help them observe other students, learning environments and educational policies with a critical eye. Students may be expected to complete child and family studies courses, along with educational science classes in order to learn more about what makes a classroom or curriculum effective or ineffective as the case may be.

While taking on these subjects, participants in the MSc program should learn a number of skills, including critical thinking, collaborating in groups, and putting plans into action. These skills are highly valuable in students' private lives as well, helping them to implement change and communicate with others effectively.

Because education is a global concern, graduates with an MSc in Pedagogy may be able to find a wide array of employment opportunities after they've completed their necessary courses. Educational researcher, educational policy maker, curriculum advisor, curriculum developer, educational coordinator in schools and program manager are some of the common job titles students may encounter during their post-graduation job hunt. These are jobs that allow graduates to have a direct impact on their country's educational policies.

Compulsory & elective modules (courses)

Semester 1

1. Modern problems of science and education
2. Philosophical Problems of Education
3. Psychology of education

4. Technology of higher professional education
